

Home Learning Ideas

Spring 2

We really enjoy sharing home learning as it is great way for the children to explore the topic further, share their learning with you at home and demonstrate their independent skills. This half term, we are covering Science, Geography and Art. Here are some ideas that could spark the children's imagination but please only use these as ideas:

- Create a model of the Earth showing the layers
- Find images of volcanoes and create your own picture
- Research famous volcanic eruptions from history
- Research a volcano and create a fact file about it
- Create a story or play set around a volcano, earthquake or tsunami
- Create a poem about a volcano, earthquake or tsunami
- Create a model of a volcano
- Make a PowerPoint about types of extreme weather
- Learn about different rocks and fossils, and maybe even go fossil hunting!
- Discover the life of Mary Anning and create a fact file about her
- Look at artwork showing different landscapes and create your own picture
